

## Semester 1 TM581 - Foundation

Through the use of books, videos and the web the students will look at the different stages of design. They will be taught about workshop graphics and how to sketch to proportion. Correct and safe use of tools, woodworking terms and safety in the workshop will also be taught. Students will construct one major project over the semester.

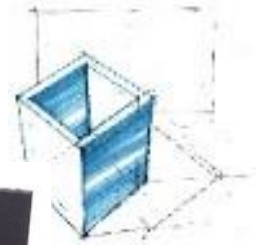

## Assessment

There will be a theory test on tool names, uses and metalworking terms. A practical test at the end of the semester will be used to assess skills as well as the finished project.

## Semester 2 TM582 – Foundation 2

Through the use of books, videos and the web the students will look at the different stages of design. They will be taught about workshop graphics and how to sketch to proportion. Correct and safe use of tools, woodworking terms and safety in the workshop will also be taught. Students will construct one major project over the semester which will require different skills to Semester 1.

## Assessment

There will be a theory test on tool names, uses and metalworking terms. A practical test at the end of the semester will be used to assess skills as well as the finished project.
